**FEDERATED IT AWARDED \$400M BLANKET PURCHASING AGREEMENT  
WITH FEDERAL BUREAU OF INVESTIGATION**

**Washington, D.C.** - Federated Information Technologies, Inc. (Federated IT) announced on Monday, August 26<sup>th</sup> that it was recently awarded a five-year \$400 million Blanket Purchase Agreement (BPA) with the Federal Bureau of Investigation (FBI).

Federated was one of 9 Awardees under the 8(a) track of the Information Technology Services Contract (ITSC) for the FBI. The scope of work anticipated under the BPA includes the continual support of the current tasks awarded under the FBI ITOC and ITES contracts as well as addressing the technology trends that are prevalent in the IT commercial arena. From a technology perspective, the ITSC objective is to maintain the current level of support for the FBI's infrastructure, applications and IT management services. The implementation of the BPA will allow the FBI to align the new infrastructure, applications and IT management requirements with the current presidential, agency and division level priorities and initiatives. This contract vehicle allows contractors to provide information technology support services to include personnel and facilities to design, develop, maintain, enhance and provide operational support for automated systems that are, or will be, resident on mainframes, minicomputers, servers and microcomputers.

“We are thrilled to be awarded this opportunity at the FBI and look forward to supporting their technology needs for years to come, said Matthew Bucholz, President of Federated. We were a Prime on the original ITSC contract, which allowed us to enhance our deep understanding of the customer and their unique requirements. This knowledge will certainly contribute to the caliber of solution delivery.”
